A Software Engineer in Information Systems with 4 years of experience in software development, specialising in ASP.NET Core, SQL Server and MongoDB. From architecting API structures and optimising stored procedures, to monitoring and debugging production systems with exposure to Angular for frontend development and CI/CD pipelines throughout the SDLC.

Education

Dublin Business School
MSc in Information Systems with Computing

Sept 2024 – Sept 2025

Experience

GEP Worldwide
Software Engineer

India
2021–2024

- Maintained SLA targets for production issues, resolving blocker bugs within 1 day and critical issues within 3 days through Kanban-based prioritisation and CI/CD workflows.
- Performed production monitoring and issue investigation using Kusto queries and New Relic dashboards to identify and resolve system issues.
- Spearheaded unit testing implementation using XUnit, achieving 90% code coverage from zero on a new project.
- Built and refined four core Angular screens from scratch, continuously improving the UI based on direct user feedback.
- Continued working on ASP.NET Web APIs in .NET 6 to cater to business needs.
- Integrated a Kafka-based queue system with rule-driven processing in collaboration with the platform team.
- Built and maintained an OpenXML SDK-based API for dynamic Word document generation, used by 20+ clients, including designing and managing the underlying XML structure.

Associate Software Engineer

2020-2021

- Setup the ASP.NET structure in accordance to the GEP architecture as the first member of a new project.
- Created and published multiple CRUD API in ASP.NET CORE which interacted with both SQL Server and Mongo DB.
- Enhanced API performance by optimizing SQL Server stored procedures and simplifying redundant query logic.

Projects

Secure Chat App

[Project Link](#) 

- Built a real-time full-stack chat platform using ASP.NET Core, SignalR, Angular 18, MongoDB, and Docker.
- Implemented JWT authentication, GitHub OAuth integration, and websocket-based live messaging with SignalR.
- Developed responsive Angular frontend with Tailwind CSS and integrated real-time communication through SignalR client connections.
- Containerized the application stack and configured NGINX-based deployment workflows for scalable hosting.

Technologies

Languages: C#, SQL, JavaScript, Python, TypeScript

Technologies: .NET, Microsoft SQL Server, MongoDB, Angular, xUnit, Node.js, Git, Docker
